Question:

Find the direction and normal vectors of the given line $x + y = 0$

| Variable | Description |
|----------|--|
| m | Direction vector |
| n | Normal vector |
| h | Intercept vector |
| x | Vector which represents points on the line |

TABLE I: Variables Used

Solution: The normal vector can be found out as

$$x + y = 0 \quad (1)$$

$$\mathbf{x} = \begin{pmatrix} x \\ y \end{pmatrix} \quad (2)$$

$$(1 \quad 1)\mathbf{x} = 0 \quad (3)$$

$$\mathbf{n} = \begin{pmatrix} 1 \\ 1 \end{pmatrix} \quad (4)$$

The direction vector can be found out as

$$x = x \quad (5)$$

$$y = -x \quad (6)$$

$$\mathbf{x} = \begin{pmatrix} x \\ y \end{pmatrix} \quad (7)$$

$$\mathbf{x} = x \begin{pmatrix} 1 \\ -1 \end{pmatrix} + \begin{pmatrix} 0 \\ 0 \end{pmatrix} \quad (8)$$

$$\mathbf{x} = k \begin{pmatrix} 1 \\ -1 \end{pmatrix} \quad (9)$$

Direction vector: $\mathbf{m} = \begin{pmatrix} 1 \\ -1 \end{pmatrix}$

Normal vector: $\mathbf{n} = \begin{pmatrix} 1 \\ 1 \end{pmatrix}$
