Question:

If point $\mathbf{A} \begin{pmatrix} 2 \\ -4 \end{pmatrix}$ is equidistant from $\mathbf{P} \begin{pmatrix} 3 \\ 8 \end{pmatrix}$ and $\mathbf{Q} \begin{pmatrix} -10 \\ y \end{pmatrix}$, find the values of y . Also find distance PQ .

Solution:

Symbol	Value	Description
\mathbf{A}	$\begin{pmatrix} 2 \\ -4 \end{pmatrix}$	First point
\mathbf{P}	$\begin{pmatrix} 3 \\ 8 \end{pmatrix}$	Second point
\mathbf{Q}	$\begin{pmatrix} -10 \\ y \end{pmatrix}$	Point such that \mathbf{A} is equidistant from \mathbf{P} and \mathbf{Q}

TABLE 0: Variables Used

$$\|\mathbf{A} - \mathbf{P}\|^2 = \|\mathbf{A} - \mathbf{Q}\|^2 \quad (0.1)$$

$$(\mathbf{A} - \mathbf{P})^\top (\mathbf{A} - \mathbf{P}) = (\mathbf{A} - \mathbf{Q})^\top (\mathbf{A} - \mathbf{Q}) \quad (0.2)$$

$$(\mathbf{A}^\top)(\mathbf{A}) + (\mathbf{P}^\top)(\mathbf{P}) - 2(\mathbf{A}^\top)(\mathbf{P}) = (\mathbf{A}^\top)(\mathbf{A}) + (\mathbf{Q}^\top)(\mathbf{Q}) - 2(\mathbf{A}^\top)(\mathbf{Q}) \quad (0.3)$$

$$(\mathbf{P}^\top)(\mathbf{P}) - 2(\mathbf{A}^\top)(\mathbf{P}) = (\mathbf{Q}^\top)(\mathbf{Q}) - 2(\mathbf{A}^\top)(\mathbf{Q}) \quad (0.4)$$

$$\begin{pmatrix} 3 & 8 \end{pmatrix} \begin{pmatrix} 3 \\ 8 \end{pmatrix} - 2 \begin{pmatrix} 2 & -4 \end{pmatrix} \begin{pmatrix} 3 \\ 8 \end{pmatrix} = \begin{pmatrix} -10 & y \end{pmatrix} \begin{pmatrix} -10 \\ y \end{pmatrix} - 2 \begin{pmatrix} 2 & -4 \end{pmatrix} \begin{pmatrix} -10 \\ y \end{pmatrix} \quad (0.5)$$

$$73 - 2(-26) = 100 + y^2 - 2(-4y - 20) \quad (0.6)$$

$$y^2 + 8y + 15 = 0 \quad (0.7)$$

$$y^2 + 8y + 16 = 1 \quad (0.8)$$

$$y = -3, -5 \quad (0.9)$$

The value of y is -3 or -5.

The Distance d between \mathbf{P} and \mathbf{Q} is

$$d = \|\mathbf{P} - \mathbf{Q}\| \quad (0.10)$$

$$d = \sqrt{(\mathbf{P} - \mathbf{Q})^\top (\mathbf{P} - \mathbf{Q})} \quad (0.11)$$

$$(0.12)$$

$$d = \sqrt{\begin{pmatrix} 13 & 11 \end{pmatrix} \begin{pmatrix} 13 \\ 11 \end{pmatrix}} \text{ or } d = \sqrt{\begin{pmatrix} 13 & 13 \end{pmatrix} \begin{pmatrix} 13 \\ 13 \end{pmatrix}} \quad (0.13)$$

$$d = \sqrt{290} \text{ or } d = 13\sqrt{2} \quad (0.14)$$
